RISE UP FOR THE CLIMATE

The fracking industry has a terrible track record around the world – leaving a trail of health problems behind it, as well as pollution to land, air and water.

Barclays Bank owns 97% of Third Energy – a company planning to frack across Ryedale, North Yorkshire. They plan 19 wells, including some very close to the beautiful North York Moors National Park.

Barclays has a long history of funding dirty energy and now it's putting the people and countryside of North Yorkshire at risk. Please support the communities of Ryedale by asking Barclays to stop funding fracking.

If fracking happens in Ryedale, it's more likely to happen everywhere.

BARCLAYS

STOP FUNDING FRACKING IN RYEDALE

Fracking risks our health, our homes and our climate.

"You can be in favour of fixing the climate. Or you can be in favour of exploiting shale gas. But you can't be in favour of both at the same time"
John Ashton, former leading UK climate change diplomat

The fight against fracking is the sharp edge of the battle against climate change in the UK.

Floods, typhoons and droughts are already impacting millions of people, both here and abroad. We can't afford to extract and burn ever-more fossil fuels. But the Government is pushing ahead with dangerous fracking, making things worse.

To stop dirty projects like fracking, we need to join together to demand action and show that we have the solutions to problems like climate change. There are lots of opportunities coming up to get involved:

28 November – Climate marches in Edinburgh & Cardiff

29 November – The People's March for Climate, Justice and Jobs in London

11-13 December – Come with us to Paris to demonstrate during the final weekend of the UN climate talks

30 January 2016 – Friends of the Earth is organising a big event in London to plan where the climate movement goes next
